Deployment

Repository: <https://github.com/ShauryaCoder101/strucon> (branch `main`)

Deploy to Vercel

Vercel needs to be connected with your own account, so these steps are done from the dashboard once. After that, every `git push` to `main` deploys automatically.

1. Go to <https://vercel.com/new> and sign in with GitHub.
2. **Import** the `ShauryaCoder101/strucon` repository.
3. Framework preset is detected automatically as **Next.js** — leave the build

command, output directory, and install command at their defaults.

1. Add the environment variables below (Settings → Environment Variables), then

click **Deploy**.

Environment variables

VARIABLE	REQUIRED	PURPOSE
`ADMIN_PASSWORD`	Yes, to use `/admin`	Password staff type at `/admin/login`. Use a long, random value.
`ADMIN_TOKEN`	Yes, to use `/admin`	Opaque session-cookie value. Use a separate long random string.
`RESEND_API_KEY`	For live lead emails	Not yet wired — see REQUIREMENTS.md §6.
`LEADS_TO_EMAIL`	For live lead emails	Inbox that receives form submissions.

> **Security:** the repository is public, so the app refuses admin sign-in entirely when `ADMIN_PASSWORD` / `ADMIN_TOKEN` are unset in production. There is no default password on a live deployment — this is deliberate.

Generate strong values with:

```
node -e "console.log(require('crypto').randomBytes(32).toString('hex'))"
```

Known limitation: admin saving on Vercel

The built-in CMS persists content by writing JSON to `content-data/` on disk. **Vercel's serverless filesystem is read-only**, so on Vercel:

- ✅ The whole public site works — all 44 routes, forms, SEO, schema.
- ✅ `/admin` loads and content is viewable/editable in the UI.
- ❌ **Save fails.** The API returns a clear message rather than a generic error.

Until a storage backend is connected, content changes are made by editing `src/content/*.ts` (or `content-data/*.json`) locally and pushing to `main`.

Options to restore admin saving

OPTION	EFFORT	NOTES
Vercel Blob	Small	Swap the read/write functions in `src/lib/content-store.ts`. The store is already abstracted behind `readCollection` / `writeCollection`, so this is a contained change.
Vercel Postgres / Neon	Medium	Better if you later want versioning or multiple editors.
Host with a persistent disk (Railway, Render, VPS)	None (code)	Works as-is, no code change; loses Vercel's edge network.

Before pointing strucon.net at this

See the go-live checklist in business-case.html §10 — in particular the 301 redirect map from the old WordPress URLs, and verifying the placeholder stats, ISO certification version, client names, and team bios.
