STRUCON CONSULTING PRIVATE LIMITED

Website Review & Recommendation

Where the new website stands, the evidence for replacing the current one, and the short list of items still needed from you to go live.

PREPARED BY	DOCUMENT	DATE	STATUS	PREVIEW
Shaurya Sharma	STR-WEB-2026-02	10 November 2026	For review	strucon.vercel.app

01 · IN SHORT

Summary

The new STRUCON website is **built and live for your review** at **strucon.vercel.app**. It has 54 pages against roughly 15 on the current site, and now carries your real case studies, clients, directors, certification and approved legal text.

Three things remain: a short list of **photographs and brand files**, three **factual points to settle**, and your decision to proceed. Everything still awaiting you is marked **"TBD"** on the site itself, so nothing looks finished when it is not.

PAGES
54
Against ~15 today. Each one is a separate chance to be found on Google.

CASE STUDIES
10
Your real projects, with named clients and tonnages.

WAYS TO ENQUIRE
5
Versus one contact page today, with no way to send a tender.

CURRENT SITE CORE
Dec 2018
WordPress 5.0.22, with plugins from 2019. A documented security risk.

PAGES DESCRIBING THEMSELVES TO GOOGLE
0 → 54
The current site has no meta descriptions and no sitemap at all.

STILL NEEDED FROM YOU
14
Mostly photographs. Listed in section 04.

RECOMMENDATION

Replace the current website. Every measured comparison in section 03 favours the new site, and the current one carries a live security risk and is effectively invisible to Google. The remaining work is content, not engineering.

02 · WHERE IT STANDS

What is already on the new site

Everything you sent in your content forms has been applied. None of it is invented — where you left a question blank, the site says so rather than filling the gap.

AREA	NOW LIVE
Case studies	All 10 of your real projects — Bakreswar (19,000 MT), Sasan (15,000 MT), Paradip, Kochi, Nagarjuna, Baga Cement (135 m preheater tower), Semen Andalas, Sharjah Cement, NOM Nigeria and JSW blast furnace.
Clients named	Larsen & Toubro, Reliance Energy, Jaypee Ventures, Punj Lloyd, Paul Wurth, JSW Steel, Enexco Technologies.
Certification	ISO 9001:2015, shown on the homepage and About page.
Leadership	Owais Ahmad, Rukhsada Khatoon, Yasir Ali and Mohammad Shaheem.
Industries	Your ten sectors, each with its own page and your scope list.
Services	Eight service pages, with your confirmed software and 3000+ MT per month capacity.
Careers	Your five live vacancies, with an online application form.
Legal	Your approved Privacy Policy and Terms of Use.
Company details	Registered and corporate addresses, CIN, GST, LinkedIn.

Why the current website should be replaced

The table below is a **measured audit of the live strucon.net**, not an opinion. Each line is verifiable from the page source today.

MEASURED	CURRENT STRUCON.NET	NEW WEBSITE
Software core	WordPress 5.0.22 — released December 2018, with WooCommerce 3.6.7 and Slider Revolution 5.4.8.1 from 2019	Next.js 16, current and patched
Meta descriptions	0 — no page tells Google what it is about	Every page
Sitemap	Does not exist (returns an error)	43 pages, generated automatically
Structured data for Google	None	6 types, including FAQ and Article, which can earn richer search listings
Homepage slider images	1.33 MB of unoptimised photographs	Modern compressed formats, loaded only when needed
Scripts / stylesheets	39 / 21	Minimal — pages are pre-built, not assembled on each visit
Social sharing preview	None — LinkedIn posts show a bare link	Branded preview card
Ways to enquire	One contact page, no tender upload	Five, including tender document upload

What this costs in enquiries

Published industry research puts numbers against each of those gaps:

- Visitors form a judgement of a company in **50 milliseconds**, before reading a word, and **75% admit judging credibility by website design**.[1,2]
- **53% of mobile visits are abandoned** if a page takes more than three seconds; bounce rates rise **32%** between one and three seconds.[3,4]
- Page speed is part of Google's ranking system, and moving up one position lifts click-through by about **31%**.[5,6]
- B2B buyers spend only **17% of their evaluation time meeting suppliers** — the rest is independent research, mostly online.[7]

For most EPC prospects, your website *is* the first meeting. An engineer shortlisting steel detailers at 11pm is comparing you against competitors on a screen, not in a room.

TWO THINGS THAT ACTIVELY WORK AGAINST YOU TODAY

Security. Slider Revolution is historically among the most exploited WordPress plugins — one 2014–15 vulnerability compromised over 100,000 sites. Outdated plugins remain the leading cause of WordPress compromise.[8] A hacked site gets flagged by Google in search results, destroying exactly the trust this report is about.

Credibility details. The current homepage displays animated counters that read "0" next to Hours of Work, Clients and Staff, and the footer still says "Copyright 2023". To a procurement auditor these read as an unmaintained business.

A note on typography

The current site uses Montserrat and Open Sans — the default pairing of a purchased template, loaded in eight weights across two separate requests, most of which are never used. The new site uses a three-part system: a technical display face, a screen-optimised body face, and a monospaced face for data and drawing-style annotations, all self-hosted so text appears instantly and never shifts as the page loads. Research on typography and credibility is unambiguous: the same words are judged more trustworthy in one typeface than another, and harder-to-read type makes a task feel harder before anyone has begun it.[9,10] A procurement director will not notice the letterforms; they will notice that one site felt effortless and precise.

What we still need from you

This is the critical path. Nothing here is engineering work — it is content only. Items are marked **TBD** on the site, and a single summary page lists them all at `strucon.vercel.app/review`.

ITEM	PRIORITY	WHAT IS NEEDED
Company logo	Critical	You noted it was attached, but no logo file arrived. The site is showing a temporary placeholder mark. Vector (SVG) or a large transparent PNG, plus a white version for dark backgrounds.
Project photographs	Critical	3–5 images per project. Seven images were received and are in use; most of the ten case studies still have none.
Team photographs	Critical	Headshots of the four directors, same style for all four.
Client logos	Critical	Image files for the seven named clients. Names currently appear as plain text.
Enquiry inbox	Critical	The forms work but do not yet deliver to anyone. Confirm the address that should receive website enquiries.
Director biographies	High	Around 40–60 words each for Owais Ahmad, Rukhsada Khatoon and Yasir Ali. Mohammad Shaheem's is already live.
Homepage video	High	10–20 seconds, no sound. Steel erection, a plant, or a model walkthrough. A photograph is currently in its place.
Company profile PDF	High	The "Download Company Profile" button has no file behind it.
Service & industry photos	High	One image per service and per sector.
Client testimonials	High	Three quotes, each with the person's name, job title, company and written permission.
Google Analytics	High	So you can see visitor and enquiry numbers from day one.
Project narratives	Medium	Kochi, Nagarjuna, Sharjah, NOM and JSW have figures but no challenge/solution story. Three or four sentences each would strengthen them considerably.

Three points to settle

These are factual questions we cannot answer for you, and each would be noticed by a client who checks.

1. Were you founded in 2003 or 2008?

Your form gives the founding year as **2008**, and the website now shows that. But the company story you wrote says *"Since 2003…"* and your approved Terms of Use says *"established in early 2003"*. The site therefore says 2008 in one place and 2003 in two others.

Suggested wording: "Operating since 2003, incorporated in 2008" — which is accurate on both counts. Please confirm.

2. Which CIN is correct?

Your two forms give different numbers: `U24319HR2008PTC037858` and `U74140HR2008PTC037858`. The company number, state and year match; only the activity code differs. We have published the second, because `74140` denotes consultancy whereas `24319` denotes chemical manufacturing — but one of the two is a typing error, and a wrong CIN in the footer is a compliance matter.

3. Your Privacy Policy is missing section 12

The approved text runs from section 11 straight to section 13. We have published it exactly as supplied and have not renumbered anything. Please check whether a clause was lost.

05 · GOING LIVE

What happens next

- **You review** the site at strucon.vercel.app and return the items in section 04.
- **We apply** your content and remove every TBD marker.
- **We redirect** each old web address to its new equivalent, so existing links and search rankings carry across rather than breaking.
- **We connect** the enquiry forms to your inbox and switch on Google Analytics and Search Console.
- **We point strucon.net** at the new site and submit the sitemap to Google.

> ON THE FIGURES IN THIS REPORT
>
> The audit lines in section 03 are measured from the live site and are verifiable today. The research percentages describe effects observed across large numbers of websites — they indicate direction and scale, not a guaranteed outcome for strucon.net. The measured facts alone support the recommendation.
